

Full Stack Java Angular Developer / DevOps

5 years of experience – English speaker

MAHDI HOMRANI

☎ (+216) 58 93 28 89 • ✉ Mahdi.Homrani@outlook.com • in linkedin.com/in/mahdi-homrani

CAREER SUMMARY

ORANGE – September 2023 to Present

- Design and development of microservices with Java 17, Spring Boot 3, and REST API security using Spring Security.
- Development of web interfaces with Angular 14, REST API integration, and performance optimization (SSE, pagination).
- Business process automation with Camunda BPMN and Java worker development.
- Industrialization of deployments with GitLab CI/CD, Docker, Kubernetes, and monitoring through Prometheus and Grafana.
- Participation in Agile Scrum ceremonies, code reviews, mentoring, technical support, and continuous improvement of software quality.

ACTIA ENGINEERING SERVICES – June 2021 to August 2023

- Development of microservices and REST APIs with Java, Spring Boot 3, Keycloak, OpenFeign, and PostgreSQL.
- Deployment and administration of applications with Docker, Kubernetes, Jenkins, and CI/CD pipeline implementation.
- Implementation of application observability with Prometheus, Grafana, Alertmanager, and Spring Boot Actuator.
- Development of asynchronous processing with Apache Kafka, Zookeeper, and Angular 15 interface integration.
- Participation in Agile Scrum activities, incident analysis, Cloud platform monitoring, and continuous improvement of service performance and availability.

FUNCTIONAL SKILLS

- Banking & Insurance
- Telecommunications
- E-commerce
- Order Management & Billing
- Business Process Automation (BPM)
- Cloud Monitoring & Supervision
- Automotive Diagnostics
- Information System Integration
- English: Fluent

TECHNICAL SKILLS

- **Languages** : Java (11, 17, 21), TypeScript, JavaScript
- **Databases** : Oracle, MySQL, PostgreSQL, SQL Server, Elasticsearch
- **Testing & quality** : JUnit, Mockito, SonarQube
- **Front-end** : Angular (V14 & V17, RxJS, NgRx), React, SCSS, CSS, HTML, Bootstrap, Fabric.js, SVG
- **Back-end** : Spring Boot (V3), Spring Data, Spring Cloud, Spring Batch, Hibernate, Kafka, FeignClient
- **CI/CD & integration** : Jenkins, GitLab CI/CD, GitHub Actions, Nexus, Maven, Docker, Minikube, Kubernetes
- **Project management** : Jira, Confluence
- **Security** : Spring Security (access management, REST API security)
- **Systems** : Linux, Windows
- **Monitoring & supervision** : Prometheus, Grafana, Alertmanager, Server-Sent Events (SSE)
- **Orchestration & workflow** : Camunda BPMN, Kafka, Zookeeper
- **Methodology** : Scrum, Agile

PROFESSIONAL EXPERIENCE

ORANGE– Full Stack Developer / DevOps September 2023 – PresentTunis, Tunisia

Project : OTB

Type : Web

Context : Participation in the development and evolution of Orange's OTB platform, a strategic web application dedicated to automating the order processing and billing cycle. The solution, based on an Angular / Spring Boot microservices architecture, helps improve process traceability, reduce manual interventions, and optimize communication performance between Orange's various information systems.

Team : 10 people (1 Product Owner, 1 Scrum Master, 1 Tech Lead, 6 Full Stack Developers, 1 QA).

Mission – Back-end

- Design and development of business services with Java 17 and Spring Boot 3 in a microservices architecture.
- Design, development, and security of REST APIs with Spring Security and Gate4.
- Participation in API contract definition and technical design decisions.
- Development of Java workers for business process execution, incident management, and process automation.
- Data persistence management with Hibernate/JPA and PostgreSQL.
- Optimization of SQL queries and data access performance.

- Improvement of application performance through advanced pagination and real-time processing using Server-Sent Events (SSE).
- Bug fixing and incremental maintenance of back-end services.

Mission – Front-end

- Development of user interfaces with Angular 14 and TypeScript.
- Development of reusable and maintainable Angular components.
- Integration and consumption of REST APIs.
- Implementation of business features in collaboration with the Product Owner.
- Application performance optimization and user experience improvement.
- Participation in the corrective and evolutionary maintenance of the application.

Workflow & automation

- Business process automation with Camunda BPMN.
- Development and maintenance of business workflows.
- Development of Java workers associated with BPMN processes.
- Orchestration of complex processes to reduce manual interventions.
- Optimization of business processes and improvement of their reliability.
- Participation in the analysis and resolution of incidents related to automated processes.

DevOps & quality

- Setup, maintenance, and optimization of GitLab CI/CD pipelines.
- Containerization of applications with Docker and deployment on Kubernetes.
- Management of application configurations via Spring Profiles.
- Application monitoring and supervision with Prometheus and Grafana.
- Development of unit tests with JUnit and Mockito.
- Code quality analysis and technical debt tracking with SonarQube.
- Participation in code reviews (Merge Requests) and application of development best practices (Clean Code, SOLID).

Planning, estimation & tracking

- Participation in Business Refinement workshops with business teams.
- Participation in Planning Poker sessions (PCX) for User Story estimation.
- Effort estimation in Story Points.
- Participation in Sprint Planning, Sprint Review, and Sprint Retrospective.
- Creation, review, and validation of Merge Requests.
- Technical support for developers, mentoring, and pair programming.
- Analysis and resolution of complex technical incidents.
- Tracking sprint progress, tasks, and deliveries on Jira.
- Communication of progress, risks, alerts, and blockers to stakeholders.

Tools : Java (17,21), Spring Boot 3, Spring Security, Angular (14,17), TypeScript, Camunda 7.4, Gate4, REST API, SSE, PostgreSQL, Hibernate, Maven, Docker, Kubernetes, GitLab CI/CD, SonarQube, Prometheus, Grafana, JUnit, Mockito, Git, Jira, Confluence.

Methodology : Agile Scrum

ACTIA Engineering Services– Full Stack Developer / Cloud DevOps June 2021 – August 2023 Tunis, Tunisia

Project : Diag Cloud

Type : Web

Context : Participation in the development of the Diag Cloud platform, a monitoring and supervision solution dedicated to ACTIA's automotive diagnostic applications. This platform centralizes metric collection, supervises microservices deployed in the Cloud, detects incidents in real time, and guarantees service availability through a microservices architecture, observability tools, and a fully automated DevOps chain.

Team : 8 people (1 Product Owner, 1 Scrum Master, 1 Tech Lead, 4 Cloud/Back-End Developers, 1 DevOps Engineer).

Mission – Back-end

- Design and development of REST APIs with Java and Spring Boot in a microservices architecture.
- Design and security of services with Keycloak (OAuth2/OpenID Connect) and Spring Security.
- Development of inter-microservice communication with OpenFeign (FeignClient).
- Participation in API contract definition and technical design choices.
- Data persistence management with Hibernate/JPA and PostgreSQL.
- Optimization of SQL queries and data access.
- Setup of supervision endpoints with Spring Boot Actuator to improve service observability.
- Evolutionary and corrective maintenance of microservices.

Mission – Front-end

- Development of user interfaces with Angular 15, RxJS, and TypeScript.
- Development of reusable and maintainable Angular components.
- Integration and consumption of REST APIs.
- Development of monitoring screens, dashboards, and real-time control panels.
- Optimization of application performance and improvement of user experience.

- Participation in the evolutionary and corrective maintenance of interfaces.

Cloud, DevOps & observability

- Containerization of applications with Docker and Docker Compose.
- Deployment and administration of microservices on Kubernetes.
- Setup, maintenance, and optimization of CI/CD pipelines with Jenkins.
- Industrialization of build, test, and deployment processes.
- Application supervision with Prometheus, Grafana, and Alertmanager.
- Configuration of monitoring dashboards, metrics, and alerts.
- Analysis of application performance, availability, and resource consumption.
- Participation in the optimization of platform resilience, scalability, and availability.
- Analysis of production incidents and implementation of corrective actions.

Asynchronous communication

- Implementation of event-driven communication with Apache Kafka.
- Development of message producers and consumers.
- Administration of exchanges and broker management via Zookeeper.
- Integration of asynchronous processing between different microservices.
- Optimization of reliability, resilience, and performance of event exchanges.

Planning, estimation & tracking

- Participation in Sprint Planning, Daily Scrum, Sprint Review, and Sprint Retrospective.
- Estimation of User Stories using Planning Poker.
- Breakdown of features into technical tasks.
- Backlog prioritization in collaboration with the Product Owner.
- Participation in defining acceptance criteria.
- Deployment of applications on Kubernetes clusters.
- Containerization and management of Docker images.
- Automation of builds, tests, and deployments via Jenkins.
- Analysis of incidents, technical logs, and anomaly resolution.
- Collaboration with Infrastructure, DevOps, and Development teams to ensure environment stability.

Reporting

- Production of service availability reports and monitoring of performance indicators.
- Analysis of KPIs (CPU, memory, latency, availability, and response time).
- Presentation and updating of Grafana dashboards.
- Communication of critical incidents and follow-up of action plans.
- Technical documentation of Kubernetes environments, Jenkins, and deployment procedures.
- Proposal of continuous improvement actions to optimize service quality and platform availability.

Tools : Java 11, Spring Boot 2, Spring Security, Keycloak, OpenFeign (FeignClient), Spring Boot Actuator, Angular 15, TypeScript, RxJS, REST API, Apache Kafka, Zookeeper, PostgreSQL, Hibernate, Docker, Docker Compose, Kubernetes, Minikube, Jenkins, Prometheus, Grafana, Alertmanager, Git, Jira.

Methodology : Agile Scrum

EDUCATION & CERTIFICATIONS

- Computer Engineering Degree – ESPRIT
